

DirtGlue®

REGULAR

Creating Green Eco-Friendly Erosion Control Solutions

PURPOSE BUILT SOIL STABILISER FOR ECO-SAFE EROSION CONTROL AND STOCKPILE CAPPING

DGR is a powerful, environmentally safe acrylic polymer emulsion that produces highly effective control of dust and erosion by stabilising the top layers of soil. DGR is non-hazardous, water soluble, engineered solution that does not contain harmful chemicals making it safe for people, animals or aquatic life. DGR is non hazardous and non-toxic to people, animals, marine life and plants making it safe and easy to use.

HOW IT WORKS

DGR is formulated to coat and bond soil particles together by filling the microscopic spaces between them to produce a strong but flexible seal. DGR has undergone extensive development giving it class leading UV resistance, superior bonding strength, expanded temperature range, increased flexibility and water repellency.

USES AND BENEFITS OF DIRTGLUE

- Erosion control for embankment stabilization
 - Stockpile capping
- Sediment control due to water run-off
 - Dust control in non-traffic areas
 - Hydromulching and seeding
- Environmentally safe and easy to use
