

# DustLess®

Creating Green Eco-Friendly Dust Solutions

## EFFECTIVE AND NATURAL SOLUTION FOR THE CONTROL OF EXTREME DUST

DustLess is an organic based liquid especially formulated for use in high traffic areas for the control of extreme dust issues. DustLess is a more effective and consistent method of dust control for all types of soils and aggregates. DustLess is non-hazardous and non-toxic to people, animals, marine life and plants making it safe and easy to use. Perfect for the control of dust in any situation.

### HOW IT WORKS

DustLess works differently to traditional dust control methods by being absorbed into the individual soil particles rather than surrounding or “floating” the particle as water does. It works by significantly increasing the molecular weight of the particle making it too heavy to be suspended in air. DustLess will provide a dust-free surface while maintaining consistency in performance and traction. DustLess will not evaporate providing effective dust control for long periods eliminating the need to water.

### USES AND BENEFITS OF DUSTLESS

- pH neutral making it safe and easy to use
- Effective and consistent long-life dust control
- Easy to apply using simple spray applications
- Ideal for dust control in unpaved roads, parking lots, arenas,
  - Mining, landfill and construction sites
